introduction

Hello
We are a team that came together with a common passion and vision to achieve one goal, which is to deliver a distinguished project that achieves added value and leaves a positive impact. Let us reach this work that we are putting in your hands today. We worked together in harmony and collaboration, hoping that this project reflects our passion and keenness on creativity and excellence

Project Idea

Production design and development of an application to book health appointments and remind the elderly of treatment appointments and design an easy-to-use confrontation

To facilitate the work for users and meet their needs with faster time and less effort.

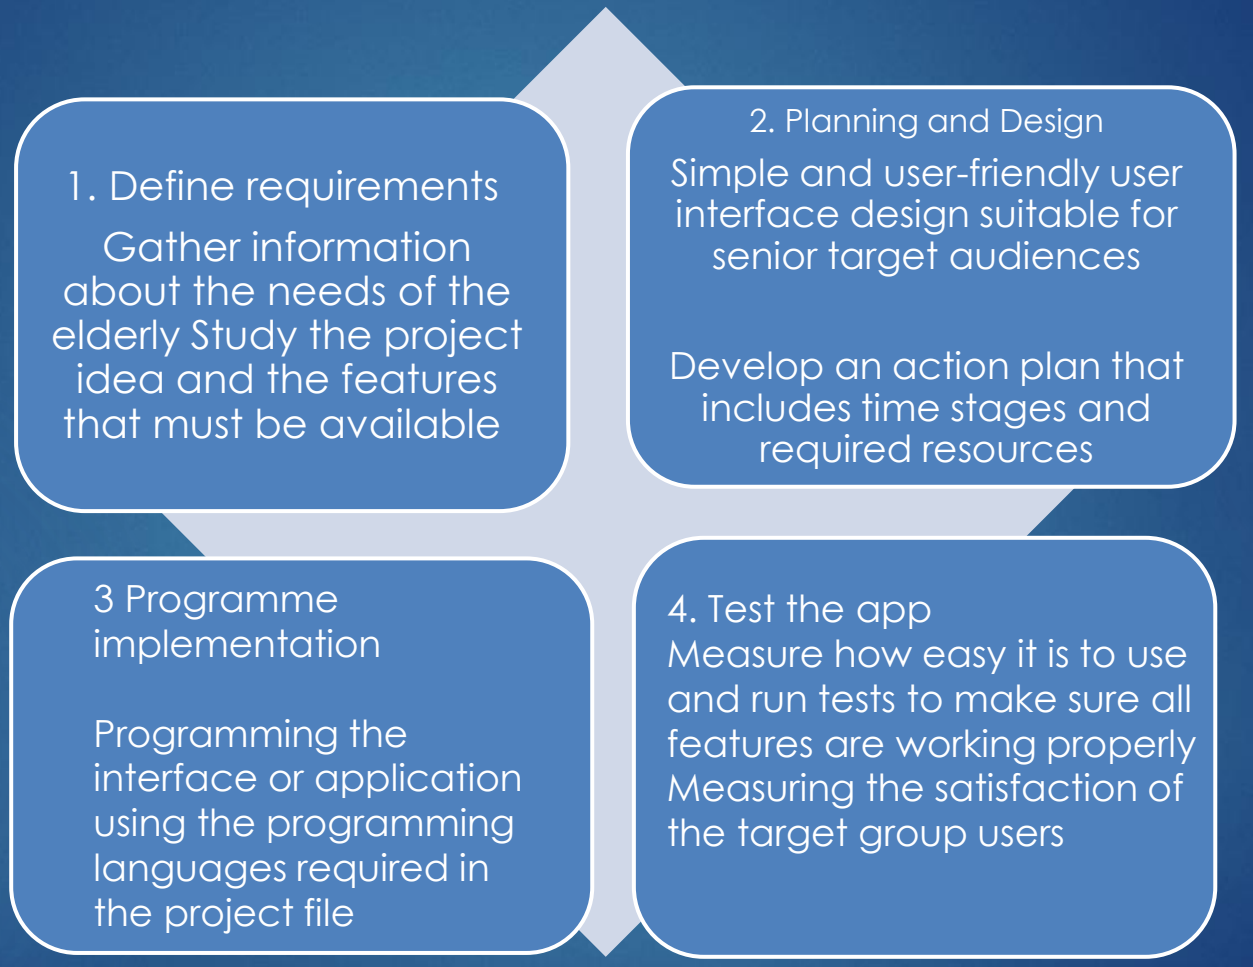
OBJECTIVE OF THE PROJECT

In light of the rapid technological progress, caring for the health of individuals, especially the elderly, has become urgent, and requires innovative and effective solutions This project aims to develop an application to book health appointments and remind the elderly of treatment appointments, to make it easier for them to organize their treatment schedule and improve their communication with doctors and medical centers The application provides multiple features such as automatic alerts and personal reminders, which contributes to enhancing their commitment to treatment and reducing the burden on them and their families

Target Group

1. Elderly: who need help remembering and managing treatment appointments easily.
2. Families and family members: who wish to support the elderly, follow up on their health condition, and ensure that they adhere to treatment appointments.
3. Healthcare providers: such as doctors and nurses, who can use the app to organize and communicate with seniors effectively.
4. Health institutions: hospitals and clinics that provide services to the elderly and need an effective appointment management system and reduce forgetfulness or delays

Action steps



Benefits for users

1. Improve time management: It helps users organize their appointments better.

2. Regular reminders: The app provides reminder alerts, reducing the incidence of missed appointments and promoting adherence to treatment.

3. Ease of use: The application is designed in a simple and easy-to-use way, enabling the elderly to use it without the need for advanced technical skills.

4. Quick communication with healthcare providers: Provides an easy way to communicate with doctors and health centers, making it easy to get support and assistance when needed.

5. Reduce the burden on the family: The app helps relieve stress on family members who usually take responsibility for organizing senior appointments.

TASK DISTRIBUTION TABLE

Student Name	Mission
Azizah ALshahrani ID:443404733	• Identify requirements: collect information about the needs of the elderly and study the project idea • Identify key features: Determine what features the app must have to meet users' needs
Razan Balhareth ID:443300195	:Planning and Design User Interface Design: Create a simple and user-friendly .user interface suitable for seniors Develop a business plan: Identify the time stages and .resources required to complete the project
Kholoud Al mosaed ID:443404224	Program Implementation: Application Programming: Start programming the interface using the required programming languages. Application testing: Conduct usage tests: measure the ease of use of the app, ensure that features are working correctly, and measure the satisfaction of the target group

Team Performance Evaluation Form

	The member is obligated to deliver tasks on time	Punctuality
	The quality of the delivered worksheet or presentation	Quality of work
	Ability to work with the team and communicate effectively	Communication and collaboration between the work team
	Follow the instructions and directions related to the project	Compliance with instructions

Final Assessment: \ 15

Additional Notes :

CONCLUSION

In conclusion, we hope that the appointment booking app will contribute to improving the quality of life of the elderly by making it easier to manage their medical appointments and provide them with the necessary support. We believe that this application will be an effective tool that enhances their independence and reduces the burden on their families, thus contributing to improving their overall health experience. Thank you for your interest and look forward to your comments and opinions on this project.
